

What advice would you give to someone considering an opportunity at Bank of America?

“Success can be achieved by persistence and your passion.”

What is your current assignment and primary responsibilities?

I work in Market Data Services in the Enterprise Technology & Delivery Group. My team manages infrastructures which provide market data from various vendors, trading technologies and also connectivity to stock exchanges in Asia Pacific. We support both developers and users.

What is the most challenging part of your job?

My job duties require timely response because the stock market will not wait. Short turnaround time is always expected from the business to deploy new products or to recover from outages. With the vast amount of services we support, efficiency and good communication skills are key.

What is the best thing about living and working in your location?

Living in one of the world's fastest growing economies, you will find exciting business opportunities from around the world. Asia Pacific offices are relatively smaller than the U.S., so young professionals will often get more exposure and responsibilities.

What advice would you give to someone considering an opportunity at Bank of America?

Success can be achieved by persistence and your passion. It is important to understand what your mission in life is because work is also part of it. If you are looking for a diverse, dynamic environment with a lot of career opportunities, Bank of America is definitely your choice.

What other activities do you enjoy outside of your work day?

Outside of my work, I am active in Girl Guiding where I am a leader of a troop with 25 teenage girls. Volunteering is a great way to relieve stress while you give back to your society.
