Find out what a typical day-in-the-life is like for **Roman.**

What is a typical day in your life at Bank of America?

9:00 – 9:30 AM: Arrive at my desk and review a dozen or so emails about products I work on from branches that start work 2-6 hours before London.

9:30 – 10:00 AM: Check my calendar, so I don't miss any meetings. Review bugs identified by QA team.

10:00 – 10:15 AM: Daily stand-up call on project progress.

10:15 – 12:30 PM: Meetings with developers in other branches to discuss any issues and concerns in more detail or continue development efforts.

12:30 – 1:30 PM: Lunch

1:30 – 3:00 PM: Continue development or informal discussions with other developers and subject matter experts about the projects and assignments.

3:00 – 4:00 PM: Meetings with internal business partners to discuss requirements or changes to the product.

4:00 – 4:30 PM: Check in code to source control. Check in Cruise Control that build is not broken by my changes. Fix build if broken.

4:30 – 5:00 PM: Send out emails identifying new changes to QA team and other developers.

What is your current assignment and primary responsibilities?

I'm currently developing a reporting tool that provides statistics on straight-through processing of payments. This application will be used in multiple Bank of America offices around the world to identify failed transactions. My role also includes providing technical guidance to facilitate redevelopment of old applications using new technologies.
